Highlights

Playwright

Azure Devops

Kibana

Agile Testing

Appium

Cucumber

Xray

Jira

I am a Senior Test Automation Engineer with strong experience building and evolving automation frameworks for web, API, and mobile applications. I led the development of a Playwright based test framework, focusing on clean test architecture, reuse, and long term maintainability. My work includes token based authentication, data driven testing, parallel execution, cross device coverage, and advanced UI and visual checks.

I focus on building stable and scalable tests that run reliably in CI/CD pipelines using Azure DevOps, helping teams release faster with more confidence. I also have solid hands on experience with Selenium, Cucumber, Rest Assured, and Appium.

I actively use modern automation approaches such as the Playwright MCP test server and AI assisted testing to improve test coverage, speed up test creation, and keep automation reliable. I am detail focused, analytical, and enjoy working on complex testing problems. I am looking to continue contributing as a senior automation specialist, strengthening quality through well designed test automation.

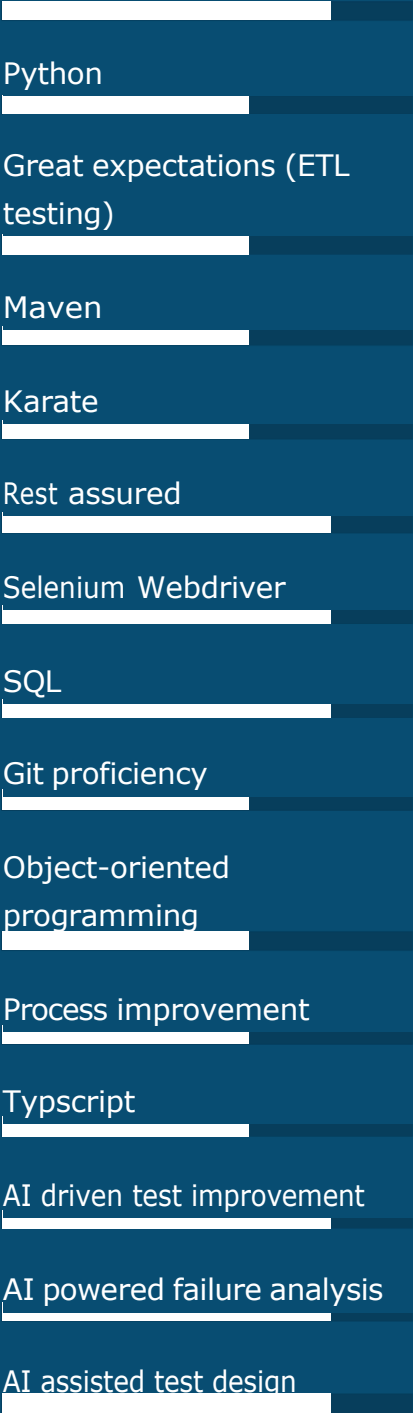

Work history

2024-06 -
Current

Senior Test Automation Engineer

Discovery

- Develop and maintain a scalable Playwright test framework in TypeScript that is easy to reuse across teams.
- Automate end to end user flows for web apps using Playwright with stable locators like `getByRole` and `getByLabel`.
- Automate API checks alongside UI tests where needed and keep them in the same repo.
- Use Playwright test runner features like projects, devices, retries, traces, screenshots, and videos to improve reliability and debugging.
- Build and run tests in Azure DevOps pipelines for continuous testing on every pull request and on a daily schedule.
- Configure CI reporting by publishing Playwright HTML reports as pipeline artifacts and sharing a single dashboard link for results.
- Work with QA and developers to agree on what to test, define the test strategy, and keep coverage high for critical journeys.

2022-09 -
2024-06

- Design good test cases and keep tests stable by using web first assertions and avoiding hard waits.
- Help junior engineers write clean TypeScript tests, review their code, and promote Playwright best practices.
- Log bugs in Jira with clear steps, evidence like screenshots or traces, and expected vs actual results.
- Run smoke, sanity, and regression suites for every release so issues are found early.
- Manage test data and environment config so tests run the same in local, SIT, and pipeline runs.
- Track quality using simple metrics like pass rate, flaky tests, and time to detect failures, and share insights with stakeholders.
- Improve the framework over time by refactoring, reducing flakiness, and adopting better tools and patterns when needed.

Senior Test Automation Engineer

RMB

- Identifying and implementing testing tool (great expectations)
- Test planning
- Reviewing and Identifying Test Requirements
- Generating and Retrieving Test Data
- Performing UAT
- Creating regression test pack
- API Testing using SOAP UI and Postman
- Creating Test Cases
- Automating Test Cases Scripts
- Executing test scripts
- Identifying defects
- Logging Defects and retesting

2021-09 -
2022-08

Test Automation Engineer

BankservAfrica

- Assist in creating Automation Framework from scratch
- Test planning
- Reviewing and Identifying Test Requirements
- Generating and Retrieving Test Data
- Performing UAT with testing partners
- Creating regression test pack
- API Testing using SOAP UI and Postman

- Creating Test Cases
- Automating Test Cases Scripts
- Executing test scripts
- Identifying defects
- Logging Defects and retesting

2019-07 -
2021-08

QA Engineer

Stellr

- Writing test plans
- Executing Test cases and documenting test results
- Generating test data
- Identifying test requirements
- Manipulating Data using SQL queries and working on NoSQL databases
- Reviewing system requirements specification
- UAT support
- End to end Testing
- Following up on fixes
- Identifying defects and requirement discrepancies
- Logging defects
- Creating BDD Automation Framework from scratch
- Automation Testing
- Regression Testing
- Tracking bugs
- Handling change Requests
- Give input on how we can improve the system
- Help developers reproduce bug/incident
- Integration testing with soapUI and Postman
- System configuration
- Designing and prioritizing test cases

2016-11 -
2019-05

Test analyst

BankservAfrica

- Designing and prioritizing test cases
- Writing test plans
- Executing Test cases and documenting test results
- Generating test data
- Identifying test requirements
- Manipulating Data using SQL queries
- Reviewing system requirements specification
- UAT support

- End to end Testing
- Following up on fixes
- Identifying defects and requirement discrepancies
- Logging defects
- Regression Testing
- Tracking bugs
- Handling change Requests
- Give input on how we can improve the system
- Help developers reproduce bug/incidents

2014-01 -
2016-10

Test Analyst

Nedbank (Enterprise Testing)

- Assist Business/Client with UAT
- Regression testing
- Integration testing
- Blackbox testing
- Negative testing
- Giving input on how to improve on the last sprint what went well and what didn't go well in retrospective sessions
- Giving input in sprint planning sessions
- Prepare test data required for execution
- Giving input on acceptance criteria for user stories in backlog grooming sessions
- Creating/updating test cases from user stories
- Executing test cases and recording results
- Recording and assigning defects in appropriate defect tracking tool
- Retest incident fixes
- Mobile device testing on different platform (Android, IOS, Blackberry and Windows)
- Liaise with stack holders
- Attend/report at daily scrum meetings
- Mentoring and upskilling new and junior staff

2015-02 -
2015-04

Consultant

SQS Bench

- Overview of the Scrum Development Process
- Agile Planning: Project Initiating and Requirements Gathering
- Overview of Agile Methodologies
- Compiling Requirements Traceability Matrix
- Compiling a Test plan
- Web Services and XML

- Static Techniques and Test Design in software testing
- SQL Advanced for testers
- Agile programming and Testing
- My duties on the bench are basically up skilling on testing, below are some online courses and tasks I have completed since I was assigned to the bench on the 16th Feb.

2014-08 -
2015-02

Tester

Nedbank

- Regression testing
- Negative testing
- Blackbox testing
- Attend regular test progress review meetings with all members of the project team
- Update test manager/project manager with status of testing / issues on a regular basis (both informal communication and written reports)
- Assist developers to resolve issues.
- Retest incident fixes
- Recording & assigning defects in appropriate defect tracking tool
- Communicate Test Results
- Validate the actual test results against expected results
- Execute test cases and record and check results.
- Validate the appropriateness of the test data prepared for test execution
- Testing WAP, USSD and APP suite on different platform (Android, IOS, Blackberry and Windows)

2014-01 -
2014-08

Test Analyst

First National Bank

- Executing manual functional tests from HP Quality Center
- Identifying and extracting test requirements
- Creating manual test cases
- Testing Apps on Tablet devices and mobile phones (iOS, blackberry and Android)
- Capturing Defects and reporting in HP Quality Center

Education and Qualifications

2017-01	ISTQB Advanced Test analyst Certificate: Software Testing <i>SASTQB</i>
2016-01	ISEB Intermediate Certificate: Software Testing <i>BCS, The Chartered Institute For IT</i>
2014-01	ISTQB Foundation Level Testing <i>BCS, The Chartered Institute for IT</i>
2014-01	Bsc: Computer systems <i>CTI</i>
2010-01	Matric <i>Hebron Model school</i>
